

“Insufficient Sleep is a Public Health Epidemic” –CDC

ATLANTA– A third of US adults report that they usually get less than the recommended amount of sleep. Not getting enough sleep is linked with many chronic diseases and conditions, including depression, anxiety, asthma, and obesity. Sleep is not a luxury—it is something people need for good health. Lack of sleep is a major risk factor for vehicle crashes and mistakes at work, which cause a lot of injury and disability each year. Getting enough sleep is not a luxury—it is something people need for good health.

A SLEEP DISORDER increases your patient’s risk of depression, anxiety, asthma, accidents, infertility, epilepsy, and diabetes. Further, one in five adult Americans suffers from sleep apnea, linked to hypertension, cognitive impairment, heart disease, and stroke.

While approximately 28% of U.S. adults in the United States reported frequent insufficient sleep,¹ the overwhelming majority of sleep disorders remain undiagnosed, creating unnecessary public health and safety problems. These disorders include:

- Obstructive Sleep Apnea
- Restless Leg Syndrome
- Insomnia
- REM disorders, hallucinations and sleep terrors
- Sleepwalking
- Narcolepsy
- Circadian Rhythm Sleep Disorders

Kane Hall Barry now offers home sleep testing.

Patients with a high probability of obstructive sleep apnea are eligible for home sleep testing, which is approximately one-quarter the cost of a full polysomnography in-lab test. Home sleep testing allows patients to spend the night in their own bed, minimizing first night effect - lower measured sleep efficiency.
